

Seeing and hearing.

When you see, what is it you are seeing?

When you hear, what is it you are hearing?

The eye doesn't see "here," always "there."

The ear doesn't hear "there," always "here."

The eye and the ear experience different worlds.

The eye, the ear, and the brain experience the world that is created by the gap between "here" and "there."

From the catalogue of Fujimoto Yukio "Here and There" at Nagoya City Art Museum in 2006
